

Communicate and resolve exceptions seamlessly between Taskize and email platforms

Taskize's email connector supports both inbound and outbound flows, for receiving requests by email and sending requests to email recipients from the Taskize platform.

Minimise risk by ensuring all communications are tracked and managed within Taskize, reducing the risk of information loss or security breaches.

Improve client service by centralising email communication within Taskize, users can respond promptly and efficiently, streamlining all interactions.

Taskize's email connector optimises workflow efficiency, allowing users to handle higher volumes of tasks without being overwhelmed by email overloads.

Why choose this connector?

- Automate the capture and organisation of emails, enabling smoother workflows and the smart allocation of work.
- MI reporting provides your company with valuable insights into communication trends and performance metrics.
- Taskize's email connector fosters interoperability by seamlessly bridging the gap between the platform and external email systems.
