

Taskize onboarding guide

| 5 steps to help you get
started right away

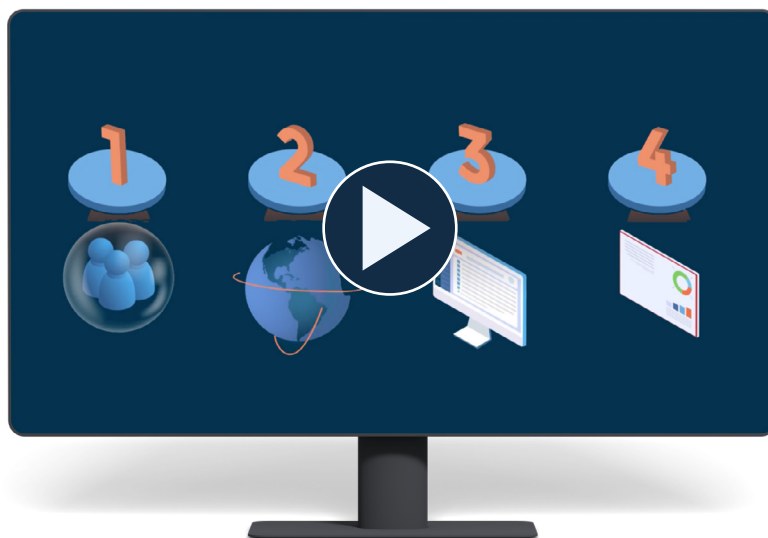

| Welcome to Taskize

Taskize's award-winning collaboration platform minimises risk, improves client service and increases operational capacity.

Interoperable and web based, Taskize is used across securities settlements, corporate actions, and collateral management. Taskize is built around four key features:

You can use Taskize to:

- Resolve margin disputes
- Appeal CSDR penalties
- Reconcile cash credit
- Resolve unmatched trades
- And much more...

If you haven't already, finish setting up your account by creating your password by following the instructions in your welcome email.

1. Everything starts with a Bubble

To resolve issues with Taskize you need to raise or respond to Bubbles. Bubbles are secure spaces (like issue tickets) with built in workflow technology that enable you to quickly collaborate with your counterparties internally, and across the Taskize network.

You can also use Bubble templates for queries you raise regularly to save time, and you can include attachments for counterparties too.

Creating a Bubble is simple...

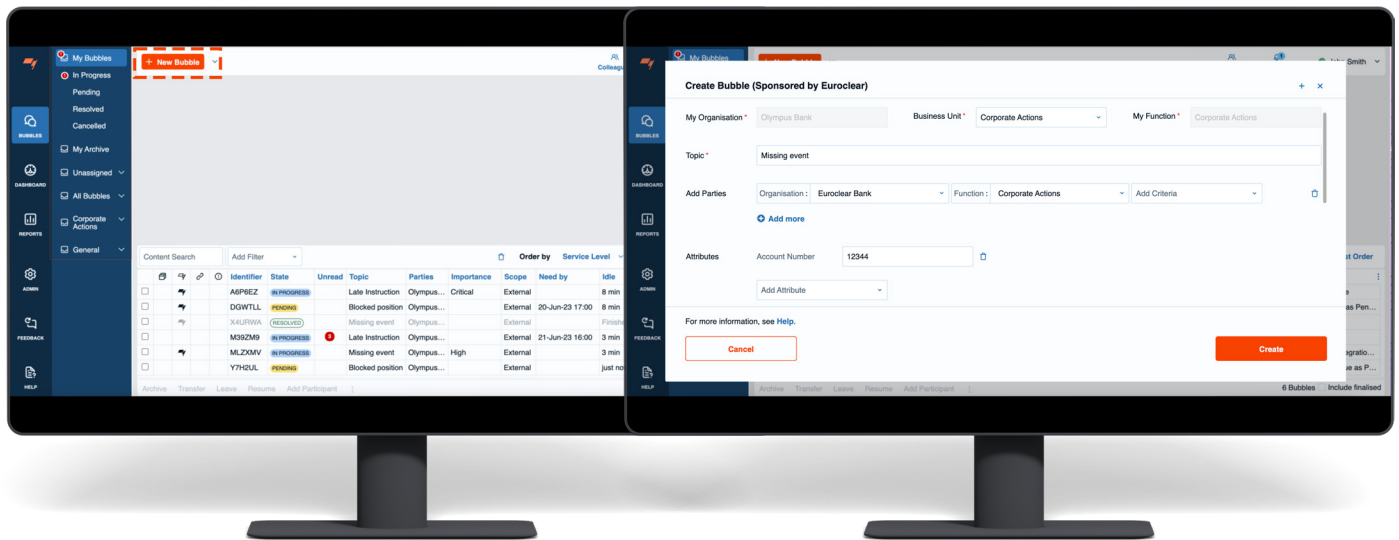

Bubbles remove the pain of managing long and complicated email threads, and our surveys show they provide better client satisfaction than both phone and email comms. You can keep all relevant messages and documents in one place, so nothing gets lost, and a clear audit trail is automatically generated.

2. Raising a Bubble with your sponsor

To contact your sponsor on Taskize simply:

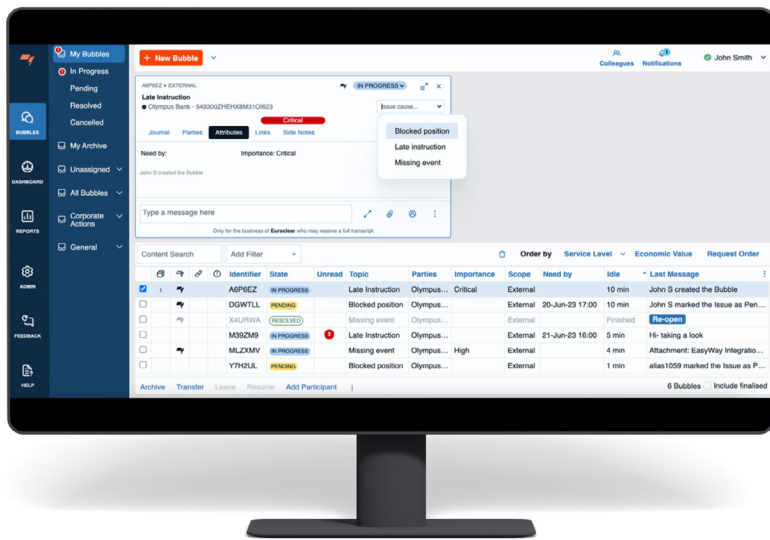

1. Create a Bubble.
2. Add them to the Bubble in the parties section.
3. Add the relevant function, for example, Corporate Actions.
4. After you've filled out all the other relevant fields in the Bubble, click **Create**

All the Bubbles you are working on will appear on your **Bubble blotter** (highlighted above). It provides you with an overview of all open Bubbles, allowing you to prioritise your workload, identify and escalate urgent issues and manage your workload more effectively.

Learn more about the Bubble blotter

Once you've resolved a Bubble, select the issue cause from the dropdown menu. The platform gathers this info to provide management information and enable root cause analysis.

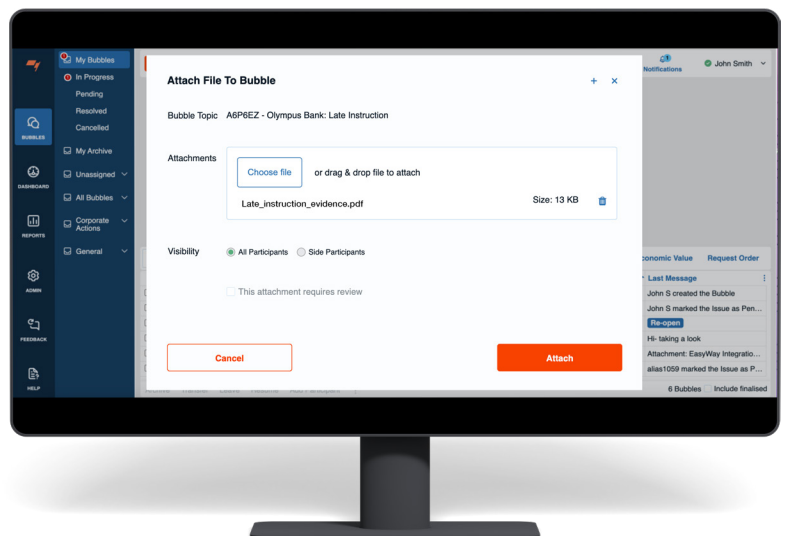

Learn more about issue cause

3. Making the most out of attachments

Taskize Bubbles can include attachments up to 200MB, and they can be sent internally and externally. File types supported include:

- Images
- Text files
- Microsoft Office documents
- Email messages
- PDF files
- XML files
- Compressed files

1. When creating a Bubble, you can drag and drop the attachment or select **Choose file**
2. After you've filled out all the other relevant fields in the Bubble, click **Create**

Depending on your organisations' settings, when you upload an attachment, you can track who has viewed and/or downloaded it.

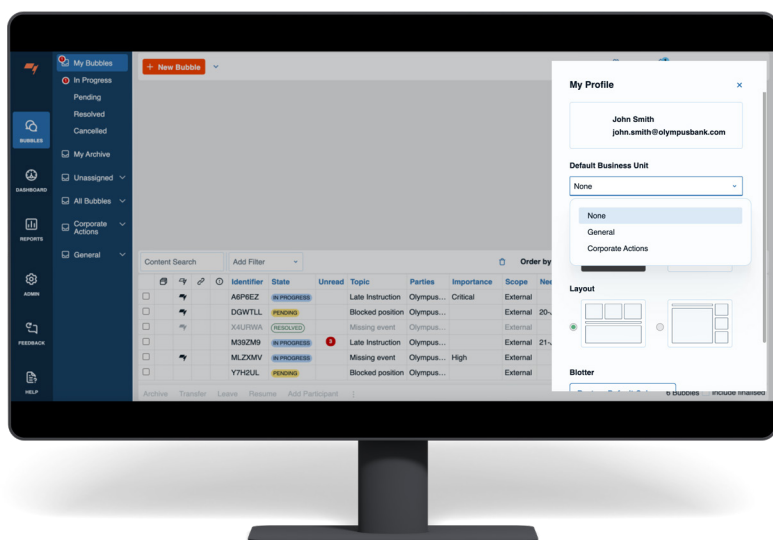

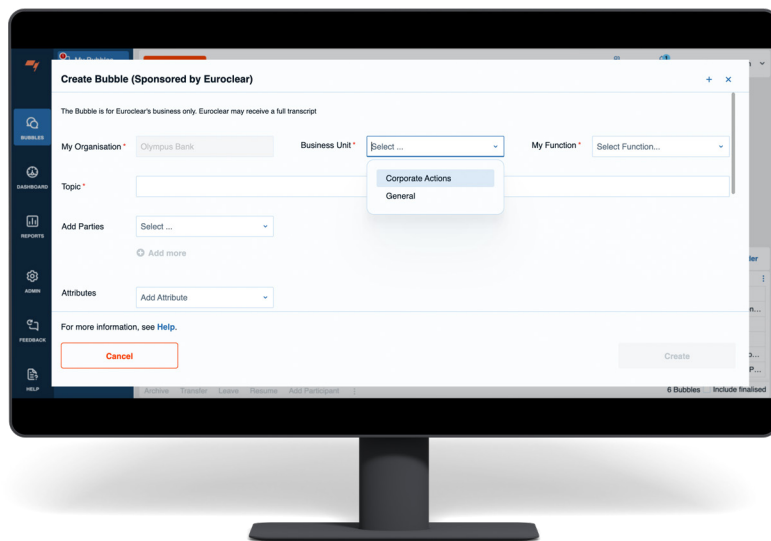

You can also set up a 'four eyes check' which allows an approver to review the attachment before others in the Bubble can view it. Automatic version control is available for all attachments so you can easily track any changes.

4. Working with business units

When you join the Taskize platform, your administrator should assign you to one or more business units.

This makes it easier for you to view and manage Bubbles relevant to you. By using business units, Taskize can also provide your organisation with more insightful and valuable statistics and reporting.

If you are a member of more than one business unit, **you will need to select the relevant business unit** when creating a new Bubble.

To set a default business unit:

1. Click on the arrow next to your name
2. Select **My profile**
3. Select your preferred default business unit from the drop-down menu
